

# SODA CAN RACE

**Balloons**

**Aluminum cans**

Rinse out and make sure your aluminum cans are dry. (A can that is wet will not roll properly.) Blow up all the balloons. Create a starting line and a finish line about six feet apart. Line up the can behind the starting line and give each explorer a balloon.

To charge the balloon have the explorer rub it on their hair or clothing. When the balloon is given an electric charge it will attract the can.

Try to move the can from the starting to the finish line using only the balloon's charge. The first can to cross the finish line wins!
